Does your facility have a CMD?

What's a CMD?
A Certified Medical Director (CMD) has gone through specific training and a credentialing program focusing on the importance of clinical and management knowledge specific to post-acute and long-term care. They are certified by the American Board of Post-Acute and Long-Term Care Medicine.

Why should PA/LTC facilities have a CMD?
CMDs are the only medical directors who have completed an accreditation program to serve in PA/LTC facilities. CMDs have been trained in PA/LTC-specific issues and must recertify every 6 years, ensuring they refresh their knowledge and have access to cutting-edge information and tools.

Studies have shown that quality of care delivered to patients in facilities with a CMD increases by 15%.

How can I learn more about CMDs?
Visit www.abplm.org for more information about how to become a CMD, the benefits of employing a CMD, and the benefits of being treated by a CMD.
Contact ABPLM at cmd@paltc.org or 410-992-3117.
